

Corporate Health Screening

of Harley Street

Maintaining Healthy And Active Lifestyles

Doctorcall's Health Screening Programme can be customised for your organisation.

We offer a range of screens from a basic health check through to our detailed Platinum Plus Health Screen and tailored health screens using the latest technology.

Health screening is carried out at our clinics in London and Manchester. Our screens are designed to provide a balance between cost (both monetary and in time) and benefit.

In our experience, patients welcome the opportunity to discuss health issues face to face with an independent doctor and, in many cases, illness can be detected early so that treatment can begin sooner rather than later.

Assessments by questionnaire can be completed online, by email, or carried out as a paper-based assessment.

There are a range of additional tests that can be provided where appropriate and for some patients a customised health screen with detailed scanning can be appropriate. Please ask for details.
